# UNIQUE

# WORKS *of nature*

Hunter Douglas wood blinds are custom made from 100% genuine wood, for consumers with the most discriminating tastes. Each blind is truly a splendid, unique work of nature. Every piece of wood tells a story of natural history...how the wood grew, weather and other environmental factors it endured. These blinds featured inside are typical examples of Country Woods® wood blinds. The presence of mineral deposits, grain patterns and color variations are part of the unique features that enhance the beauty of the blind.

# WOOD CHARACTERISTICS

The beauty of the wood lies in a variety of natural elements consisting of distinctive grain patterns, natural color variations and distinguished markings. These elements serve to confirm the authenticity of the wood.

## What to look for when you purchase wood blinds

The following terms describe some of the more common characteristics you will find in all wood products and wood blinds.

Flat Grain

Tiger Striping

Grain Change

### Grain

The direction and regularity of the wood fibers – varies widely depending on where it was cut from within the tree. The type, direction and density of the grain produce the unique patterns and color variations that make each piece of wood distinctive.

### Pin Knots

The remnants of branches encased by the growth of new wood.

### Mineral Deposits

Usually the result of environmental circumstances affecting the development of the tree.

### Burl Figures

Formed by irregular growth on the outer surface of the tree.

# DISTINGUISHED MARKINGS:

*these elements serve to confirm the authenticity of the wood.*

Classics™ Golden Oak (804)

# KNOTTY PINE FEATURES

The wood used in our Country Woods Select™ Knotty Pine wood blinds are carefully chosen to capture as many as the natural characteristics of wood as possible. The presence of knots, mineral deposits and grain pattern will bring your room alive with the beauty and warmth of the great outdoors.

Select™ Knotty Pine Amber (081)

- The wood blind characteristics have random distribution and frequency and special requests for consistency and selection unfortunately cannot be honored.

# RARE WOODS FOR DISCRIMINATING TASTES
